#####
## Manuscript title: Grazing Abandonment Negatively Affects Forage Quality in Iberian ##
## Atlantic Grasslands #####
## Authors: A. Aldezabal, U. Perez-Lopez, N.A. Laskurain & I. Odriozola #####
#####

#####
## We are indebted to Leps et al. (2011) [1] and Borcard et al. (2011) [2], for their ##
## very useful code #####
#####

#####
## This code reproduces the analyses presented in the main text, which aimed to test: ##
## 1) whether grazing abandonment promotes the production of forage of lower ##
## nutritive value, by provoking changes in plant community traits. ##
## 2) whether shifts in species abundances (species turnover) and intraspecific ##
## trait variability select for similar traits, reinforcing each other. ##
#####

## 1. Set up working directory and load the required packages
## ****
setwd("Working directory")      # Change as required. Unzip Appendix C in the working directory.
source("e6904_trait-flex-v3.R") # load additional functions from Appendix in Leps et al. (2011) [1]
install.packages("FD")          # Laliberte et al. (2014) [3]

## 2. Load and prepare data for analysis
## ****
## For the script to work appendix _C must be unzipped in the working directory.
trait<-read.csv("trait.csv",h=T)
